

# **Using SQL Server host by azure as persistent data storage**

## **Decision:**

A SQL database is to be used to store account and game data for the wordle application.

## **Status:**

Approved

## **Context:**

The web server needs a persistent connection to a database in order to create a user experience. Azure offers great support with linking azure web applications to Azure SQL databases.

## **Consequence:**

A login system can be created and data can be stored and interacted with easily.
